

# BooleBox –Data Location

*The highest security ever, just as you want it*

[www.boolebox.com](http://www.boolebox.com)

## Where is my customer data?

As a customer of Boole Server business services, you know where your data is stored.

It is particularly important for customers who operate in highly regulated industries, or in countries with data protection laws, to know the geographic location of the data that they have entrusted to the BooleBox cloud service.

Customer data is replicated within a selected geographic area for enhanced data durability in case of a major datacenter disaster

Boole Server also understands that some customers must maintain their data in a specific geographic location, such as within the European Union (EU).

## Designed to meet your compliance and regulatory needs

European service delivery

Services are delivered from Ireland/Germany datacenters.

European data residency

All customer data is stored at rest in Ireland/Germany.

BooleBox encryption

All customer data is encrypted, at rest, in transit and in use.

## All customer data resides in Europe

Boole Server relies its services on the highly guaranteed provider, Amazon Web Services (AWS). To satisfy the need of maintaining data in Europe, Boole Server chose Ireland for its storage and Frankfurt as location where to replicate it.

In detail, Amazon S3 Bucket is used as Object Storage Unit, while Amazon RDS as Database.

BooleBox platform therefore inherits every single characteristic from Amazon S3 infrastructure SLA\*.
