Secure Transfer

Securely transfer sensitive files with total control and true end-to-end protection

Secure Transfer

Secure Transfer is the fastest and most effortless way to send business files securely – with no size limits and zero complexity.

With just a few clicks, you can generate a protected link or send files directly via email, while keeping full control thanks to AES-256 encryption, customizable expiration dates, and complete access tracking. Whether you're sharing sensitive documents, large attachments, or materials for clients, partners, or suppliers, Secure Transfer ensures a rapid, compliant, end-to-end protected delivery.

It's the most immediate and secure way to transfer files – anywhere, to anyone, without ever losing control.

Main features

256-bit Encryption

Every file transferred with Secure Transfer is automatically protected by a 256-bit encryption key

Customizable Expiration

Decide how long the file will remain available: set an expiration of up to seven days for each transfer

Flexible Access Modes

If you send the share via email, you can choose how the recipient will access the file: mandatory registration, email or SMS code, or open access

Personal Key

You can set personal encryption keys on every file you transfer to block access to anyone who does not possess the key needed to decrypt it

Use cases

FAST & SECURE TRANSFERS

This tool is typically used to share files that users need only for a limited period of time and therefore do not need to be stored in the repository, but simply transferred in a quick and secure way. You can also set an expiration for the recipient, up to 7 days from the moment they receive the file.

The transfer can be carried out in two different ways:

- **Via Link:** you can send your file by generating a dedicated link and sharing it with the recipient
- **Via Email:** as an alternative to link sharing, you can transfer the file by entering the recipient's email address directly within the Secure Transfer interface

A single platform for data protection

Boolebox Security Suite is the complete solution for managing, protecting, and sharing corporate data from a single dashboard. Every organization is different: our suite adapts to your workflows without complicating tools or habits, offering continuous security and total control over files, emails, and credential.

All Boolebox applications are available in the following versions: CLOUD, ON-PREMISES, HYBRID

Our solutions:

Secure File Manager
Collaborate on Office docs in real time always protected

Secure E-Mail
Send and receive messages and attachments with advanced encryption, without compromise

Secure Password
Store and manage your credentials securely and centrally

Secure Transfer
Share large files with full protection and complete traceability

Encryption Suite boolebox

Extended protection also on external platforms

With the Boolebox Encryption Suite, you can encrypt sensitive corporate data directly on Windows, Outlook, OneDrive, and SharePoint. The suite integrates seamlessly into your existing tools, ensuring data protection, regulatory compliance, and security both locally and in the cloud, without slowing down team workflows

Our solutions:

File Encryptor for Windows
Protect local files while working in Office, in a secure and intuitive environment

File Encryptor for OneDrive & SharePoint
Apply an additional layer of security to documents on Microsoft Cloud

E-Mail Encryptor for Outlook
Ensure advanced encryption, traceability, and full compatibility with Outlook

Always-on innovation

The threat landscape is constantly evolving. This is why we innovate with method and vision, anticipating needs to drive change and ensure protection that evolves alongside our customers' business

With Boolebox, your data stays protected. Always
